- Attention to Detail
- Agile Workflow

Self-starting and resourceful Full Stack Web Developer with experience implementing front-end and back-end coding. Astute and always-learning designer of user interactions on websites and databases that are sound and easy to use. Proven problem-solver with solid grounding in data-driven applications and concepts. Communicates clearly with technical and non-technical team members and promotes drive for customer service.

Work History

Software Engineer Intern

TELLUS, Salt Lake City, UT

June 2024 - Current

I participated in a collaborative project at Neumont, where I worked with a team to rebuild TELLUS's website using React.js, Material UI, and Python. I contributed to the design of pages using Figma and prioritized tasks to complete them in order of importance. Additionally, I shadowed team members to learn new tasks and how to appropriately handle technical issues. I also collaborated with developers to identify and remove software bugs.

Software Engineer Intern

NICE CX One, Sandy, UT

January 2024 - June 2024

In a Neumont Collaborative Project with the company NICE, I converted end-to-end API tests to mock API tests and worked on front-end testing using Playwright and TypeScript. My role involved collaborating with developers to identify and remove software bugs and creating successful test scripts for managing automated feature testing. I also tested the functional compliance of company products, ran automated test suites, and evaluated performance, functionality, and scalability.

Academic Tutor

Neumont College of Computer Science

March 2023 - June 2024

In my role, I assisted students with code debugging and understanding course material. I collaborated with them to complete homework assignments, identify skills gaps, and address weaknesses. By working closely with students on specific class struggles, I reviewed materials and assignments in detail to offer targeted help. I assessed their learning needs and provided relevant instruction to close knowledge gaps, and supported them in discovering correct answers to problems by reviewing computer science class material.

Full-stack Developer

Mane Frame Photography, Salt Lake City,

March 2023 - January 2024

- Oral and written communications
- Responsive design
- Front-End Development
- Wireframe development
- Web Security
- Code debugging

UT

In my Neumont Senior Capstone Project, I developed a photography website using MongoDB, Express, React, and Node.js. This project was selected for the Capstone Invitational, giving me the opportunity to present it to a panel of judges. I was responsible for building databases and table structures for the web application, estimating work hours, and tracking progress using Scrum methodology. Additionally, I reviewed code, debugged problems, and corrected issues throughout the development process.

Education

Neumont College of Computer Science at Salt Lake City

Bachelor of Science in Website Design And Development Expected in August 2024

- 3.5 GPA
